

Information for Authors

General

The *Journal of Modern Transportation* (JMT), formerly known as Journal of Southwest Jiaotong University (English Edition) started in 1993, is a fully peer-reviewed international periodical in English for publication of technical and professional articles on analysis, planning, design, technology, economics and operations of transportation and traffic systems. Specific topics cover rail transportation, magnetic suspension and evacuated tube transportation, highway and traffic engineering, air transportation, urban transportation, intelligent transportation systems and information technology, materials science and engineering, and interdisciplinary transportation research in applied physics, mechanics, environmental science and engineering, economics, etc.

This journal is indexed and abstracted by INSPEC in UK, CSA in America, Zbl MATH in Germany, and disseminated on Web through Chinese Journal Full-text Database (CJFD) of CNKI, Wanfang Data, Chongqing VIP Information Database, Taiwan Electronic Periodical Services (TEPS), etc.

JMT mainly publishes original articles, invited reviews, case reports, short communications, and scientific letters within the journal's scope. The publication date is on the 30th of Mar., Jun., Sep., and Dec. of every year. Contributions and subscriptions from all over the world are welcome.

Submission of Manuscripts

JMT operates an online submission and peer review system that allows authors to submit articles online and track their progress via a web interface. Authors are encouraged to submit their manuscripts via online submission at <http://jmt.swjtu.edu.cn>. Sending manuscripts via E-mail (jmt@home.swjtu.edu.cn) will also be accepted.

Initial submission

Your initial submission should include the full text of your paper, along with:

A Copyright Transfer Agreement on transferring the copyright to JMT with signature of all authors (The Copyright Transfer Agreement Form can be downloaded from <http://jmt.swjtu.edu.cn/EN/column/column19.shtml>), and

A Cover Letter from the corresponding author that

1. States that the manuscript has not been and will not be considered for print or electronic publication elsewhere other than as an abstract in any languages.
2. Give a brief introduction to the novel findings of this work.
3. Supply with names of 4-6 individuals who are experts in near related topic to the work for qualified reviewing for the manuscript. Suggested referees should not be from the

same institutions as the author(s) to avoid conflict of interest. For each potential reviewer please provide complete addresses including postal codes, fax numbers, and E-mail addresses. Authors are also permitted to request that the journal excludes one or two individuals or laboratories. The journal sympathetically considers such requests and usually honors them, but the editor's decision on the choice of referees is final.

4. A declaration on submitting the manuscript with the signatures of all authors and the contact information of the corresponding author, including complete address, telephone number, and E-mail address.

Submission of revised manuscript

Submit revised manuscript which marked all corrections via E-mail with a letter to answer the reviewer and editor's comments.

The accepted manuscript must be prepared according to the final format of JMT. A Microsoft Word file template for preparation of manuscripts is available at <http://jmt.swjtu.edu.cn>, and also can be supplied by editors.

Proofreading

Once the manuscript has been accepted, the corresponding author will receive PDF proofs and are responsible for proofreading and checking the entire article. Authors should correct only type-setting errors, and no major alteration of the text could be accepted. **Page proofs must be returned within 48 hours** to avoid delays in publication.

Review Process and Acceptance

All articles are subject to strict peer review organized by the journal. Editors will forward your submission to several independent referees for review. The reviewers will make a recommendation regarding acceptance. They also may request revisions prior to acceptance. Final acceptance or rejection decision resides in the Editor-in-chief of JMT. In general, the review process takes up to 1-2 months from the date of submission, and the Editors will make every effort to reach a decision on a manuscript within this timeline. If revisions are required for further consideration for publication, we generally allow three months for revisions and only one round of revisions will be considered. If your paper is accepted for publication, one of editors will send you a formal letter of acceptance asking you to prepare and submit a final manuscript using the file Template of JMT.

Manuscript Preparation

Text components of the manuscript should be prepared with Microsoft Word 2003 and typed on only one side of A4 paper with

1.5 line spacing using 10 Pt Time New Roman font, with all pages numbered. For authors originating from China, one copy of the Chinese translation of the manuscript is also required (excluding references). Required information for each of the manuscript sections is as follows:

Title page

Title page should include title, author(s), and affiliation(s). The manuscript title should be concise and informative (removing all unnecessary words), not longer than 150 characters (including space), emphasize what is NEW, and avoid abbreviations. The name, professional title, affiliation (institution), city, zip code, and country of the author(s) should be given. Authors should be listed in full name, beginning with the first name or initials followed by the family name. If the authors are affiliated to different units, the affiliation sequence should be in the same order of the author list, marked at the right upper corner of the author names using 1, 2, 3, etc. Corresponding author's name, full postal address, telephone and fax numbers, and E-mail address should be provided.

Abstract

An informative abstract of not more than 250 words must accompany each article on page one. It should be a concise summary of the aims, methods, results, and conclusions and/or other significant items (e.g., any important new quantitative data) in the paper. Together with the title, it must be adequate as an index to all the subjects treated in the paper, and will be used as a basis for indexing. It should be understandable without reference to the rest of paper, and contain no citation to other published work. Avoid displaying mathematical formulas. Define all nonstandard symbols and abbreviations. Do not use footnote indicators. Summarized results should be exact, direct, and specific.

Key words

Please list 3-8 pieces of words or phrases for cross-indexing this article.

Text

Text should contain an Introduction that puts the paper into perspective for readers. For most article types, the rest of the main text should be structured into Methods, Results, Discussion, and Conclusions, and should include appropriate figures and tables. Data should be presented in the body text or figures and tables, not both. The SI system must be used for units of measurements throughout the text. Abbreviations, acronyms, and symbols must be fully defined the first time they are used in the paper; the definition should be given first, followed by the abbreviated term in parentheses.

Figures and Tables

Figures and tables should be self-explanatory; i.e., the content of diagrams, tables and charts should be meaningful and understandable without extensive reference to the text of the article.

- **Numbering of Figures and Tables:** Figures should be numbered in sequence according to the order of citation in the body of the paper, using Arabic numerals 1, 2, 3 and so on, each followed by a figure caption and positioned under figure. Tables should be numbered in a separate sequence, also according to the order of citation and using Arabic numerals, each followed by a table title and positioned above table. If required, parts of figures should be labeled with lowercase letters in parentheses, e.g., (a), (b), etc., with captions presented.
- **References to Figures and Tables:** Figures and tables should be mentioned clearly in the main text. References to figures in text should use the abbreviated, capitalized forms "Fig." or "Figs." References to tables should be written out in full and capitalized. Example: In Figs. 2(a) and 3, the results presented in Table 1 are depicted graphically.
- **Position of Figures and Tables:** Figures and tables should be incorporated into the main text, positioned in the section where they are first mentioned.
- **Capitalization in Figures and Tables:** Headings, sub-headings, and other elements in tables should be treated like titles: the first letter of the first word should be capitalized, and all other words should be lower case unless they are commonly capitalized. Labels in figures may be capitalized or written in lower case, as long as a consistent style is used.
- **Color, resolution and size of Figures:** Color should not be used for distinguishing data in line diagrams; instead use lettering, numbering or different types of line (full, dashed, dotted, etc.) or data point (square, triangle, cross, etc.). Note that light colors do not reproduce well when printed in black and white and could therefore make your data indistinguishable. For manuscript in revision stage, adequate figure resolution is essential to a high-quality print and online rendering of your paper. The minimal resolution is 300 dpi for grayscale and color images, and 600 dpi for combination art (lettering and images). Color figures should be prepared in CMYK mode. Generally figures should not exceed 8 cm in width, and the maximal width should not exceed 16 cm. Do not place a box or ruled frame around a finished figure.
- **Type of Tables:** Tables should be drawn with three horizontal lines, at the top and bottom of the table and between the column headings and the table body. The number and caption should be over the Table. Tables should supplement, not duplicate, the text.

Mathematical Expressions and Equations

- **Display vs. In-Text Equations:** Short mathematical expressions may be run into the text of the paper. Long or important expressions and equations should be displayed. Displayed equations should be indented 4 mm. If an

equation is too long to fit across one column, it should be broken after an operation or a relation symbol.

- **Numbering of Equations:** Display equations to be cited in the text should be numbered with an Arabic numeral in parentheses, placed flush right. A group of related equations may be assigned a single number, which should be centered vertically to the right of the group. If a paper includes appendices with numbered equations, each appendix should have its own numbering sequence: (A-1), (B-1), and so on.
- **Italic vs. Non-Italic Characters:** Numerals are set in non-italic type. Abbreviations and language-specific terms used as subscripts are also generally set in non-italic type. Variables are generally set in italics.
- **Scalars, Vectors, and Matrices:** In general, scalar variables are set in italics, vector variables are set using bold, italic, lower-case letters, and matrix labels are set using bold, italic, upper-case letters. Bold vectors should not have arrows above the letter symbol.
- **Fractions:** To minimize line spacing problems, fractions in text should be set with a solidus (forward slash “/”) on one line. Fractions in display equations should be stacked, but fractions in superscripts or subscripts may again use the solidus.
- **Spacing of Numbers:** Numbers of four or more digits on either side of a decimal point should be grouped into sets of three digits. EXAMPLE: 2 487.9, 73 568.087, 0.188 25.
- **Punctuation of Equations:** Equations should be punctuated as part of the sentence to which they belong. Thus, they will often be followed by a period or a comma. Grouped equations should be separated by commas.
- **References to Equations:** References to equations in text should use the relevant number enclosed in parentheses, preceded by “Eq.” or “Eqs.” which is the abbreviated form of “equation” or “equations”. EXAMPLE: In Eqs. (3) and (4), the value of a is negative. Eq. (5), however, presents a different result.
- **Definition of Variables:** All variables should be defined at first use, either in the text or in a where list associated with the equation.

Acknowledgements

Financial support (including the source and number of grants), individuals, affiliation, or other to be concerned who were of direct help in the work, if any, should be acknowledged by a brief statement following the text. Authors are responsible for obtaining written permission for acknowledgement.

References

Only essential references (journal article, monograph, proceedings, dissertation, report, standard, patent, and/or electronic publication, which were formally published) cited in the text can be listed in the order of their first mention in the text,

and numbered consecutively with Arabic numerals in square brackets. Personal communications and unpublished data are not acceptable references.

Listing Authors: Author’s names should be listed in natural order (first name or initials followed by last name). List all authors unless there are four or more authors, in which case only the first three authors should be given, followed by “et al.”

Listing Editors and Translators: If both an author and an editor or translator are listed, the editor’s or translator’s name, preceded by “ed.” (edited by) or “trans.” (translated by), should follow the title of the work, separated by a comma. EXAMPLE: F.R. Amdur, Simulated Biological Materials, ed. Jim Lauber and J.L. Bertrand,...

Listing Publisher: Whenever a publisher is listed, the location (city and province or state) of the publisher and the year of publication should be included.

Listing Issue Numbers, Dates, and Locations: Whenever possible, journal references should include both issue number (volume and number) and issue date (year). Conference proceedings should include conference location (city and province or state) and conference date (month and year).

Non-English Articles: References published in non-English should be translated into English, with the original language indicated in parentheses at the end of the reference, e.g., “(in Chinese)”. For non-English references, if an English title is not available in the original work, author(s) should translate the title into English with great care to avoid misinterpretation of the original title.

Copyright and Permission

Copyright transfer: To enable the publisher to disseminate the author's work to the fullest extent, the author must sign a Copyright Transfer Agreement transferring copyright in the article from the author to the publisher. Without this we are unable to accept the submission. A copy of the agreement to be used (which may be photocopied) can be downloaded from

<http://jmt.swjtu.edu.cn> and through links in the online submission system. Copies may also be obtained from the journal editors.

Permission grants: If the manuscript contains extracts, including illustrations, from other copyright works (including material from on-line or intranet sources), it is the author's responsibility to obtain written permission from the owners of the publishing rights to reproduce such extracts.

The Copyright Transfer Agreement Form should be uploaded as "Supplementary files not for review" with the online submission of your article.

If you do not have access to a scanner, further instructions will be given to you after acceptance of the manuscript.

Submission of a manuscript will be held to imply that it contains original unpublished work and is not being submitted for publication elsewhere at the same time. Papers published in JMT are protected by copyright, and cannot legally be published elsewhere in any forms without written permission from JMT.

Further Information

After papers are published, JMT will pay remuneration and send copies of the journal to the author(s).
